

Submissions for Advertised Differential Rates for 2021/2022

Submission No.	Submission
1.	<p>Objection and Comment: Once again we see rates increasing at a rate higher than wages growth , average weekly earning , CPI and even your very own local govt cost index . When will it stop . When will the council even undertake some analysis of the affordability of rates over the last 10 years .</p>
2.	<p>Objection and Comment: There has not been any increase to community services or improvements to infrastructure to justify either increased admin costs or increased rates. There is no tangible benefit to the community. If this were a private enterprise you would have priced yourself out of the market. Savings need to be found by disposing of capital intensive property and infrastructure and private / public partnerships formed to provide va He for money services.</p>
